ITEM 8.01 OTHER EVENTS.

On February 2, 2021, Travele Therapeutics, Inc. (the "Company") announced that the Company's ongoing pivotal Phase 3 DUPLEX Study of sparsentan in focal segmental glomerulosclerosis ("FSGS") achieved its pre-specified interim FSGS partial remission of proteinuria endpoint ("FPRE") after 36 weeks of treatment. Sparsentan, an investigational product candidate, demonstrated a statistically significant response on FPRE compared to the active control, irbesartan (p=0.0094). A preliminary review of the interim safety results indicate sparsentan has been generally well-tolerated and the overall safety profiles in the study to date have been generally comparable between treatment groups.

ITEM 9.01 Financial Statements and Exhibits.
